[ABOUT]

DeFi Technologies Insights Global Symposium

The DeFi Technologies Insights Symposium is a premier series of curated, in-person events that explore how [Digital Assets](#), [Real World Assets \(RWA\)](#), [Blockchain](#), [Quantum Technologies](#), and [AI](#) are reshaping modern finance across, retail, institutional, and sovereign markets globally.

[AN INTERNATIONAL EXECUTIVE SYMPOSIUM SERIES]

[DeFi Technologies](#) (Nasdaq: DEFT), with the support of [BTQ](#), [Valour](#), [SovFi](#), [Stillman Digital](#), [Neuronomics AG](#), and [Reflexivity Research](#), is proud to introduce the DeFi Technologies Insights Symposium—a curated series of high-level, in-person gatherings focused on exploring how modern DeFi approaches can efficiently bridge institutional capital markets and the decentralized finance ecosystem.

Explore the convergence of traditional capital markets and modern decentralized finance with the advent of decentralized ledger technologies, tokenization, stablecoins, and yield-bearing digital assets.

[AN EXECUTIVE SYMPOSIUM]

Hosted in leading global financial centers, the series brings together a curated group of institutional investors, regulators, securities exchange leaders, financial innovators, asset managers, infrastructure providers, technologists, blockchain foundations, and policy makers to explore how decentralized finance (DeFi) and traditional finance (TradFi) are converging to shape a new era of structured instruments, capital markets, and economic growth.

The DeFi Technologies Insights Global Symposium series is designed as a strategic platform where trusted conversations among decision makers and leaders meet cutting-edge innovation and executors.

[ABOUT]

It is not just a stage, it is a roundtable for those investors and regulators that shape the future of global finance.

[AN EXCLUSIVE OPPORTUNITY]

This **invite-only gathering** offers a collaborative venue for attendees to explore investment strategies, assess real-world use cases, debate emerging regulatory models, and examine how legacy financial institutions and Web3-native actors are jointly reshaping capital formation, asset custody, and settlement.

Discussions will go beyond core topics such as tokenization, tokenized funds, structured instruments, securitization, decentralized infrastructure, cross border payments, and institutional access to on-chain yield—extending into critical adjacent fields like Quantum Technology, AI (Artificial Intelligence), AGI (Artificial General Intelligence) and the foundational innovations driving them.

Each edition provides a forum to dissect the what, why, and how of digital assets' interaction with capital markets

SUPPORTED BY

Why Sponsor?

Your organization will be ideally positioned to **shape a critical, powerful narrative**:

through interaction with the technologies, financial products, and key players leading the intersection of traditional capital markets and modern decentralized finance.

[YOU WILL GAIN]

Extend your Reach, **Brand visibility** and **positioning** alongside industry leaders and global regulators

Direct engagement with decision-makers from sovereign funds, pensions, banks, and asset managers

Thought leadership opportunities through speaking roles, curated roundtables, and content integration

Bespoke relationship-building in a trusted, intimate setting — away from expo noise and marketing overload

Association with a **neutral, credible, and future-focused platform** driving real industry progress

[THEMATIC FOCUS]

Thematic Focus

Each edition **features curated themes** exploring:

Infrastructure, custodial innovation, investment flows, product innovations, investment assessment practices, and much more >>

[IN DETAIL]

Innovative financial instruments like ETPs, that are regulated and trade like traditional capital market products but are underpinned by modern digital assets

Real-world asset (RWA), what are they and what are their implications on commodities, real estate, funds, securities, liquidity, primary, and secondary markets

The impact of **artificial intelligence** on modern financial systems

The emergence of **Quantum Computing** and what it means to the world of digital assets

The **convergence of AI, DLT, and Quantum** within both traditional and modern capital markets

The evolution of **decentralized ledgers & regulatory regimes** that govern their tokens and their operation

Emerging sources of liquidity and capital, frameworks for evaluating investment opportunities and projects

Who You'll Reach

Sponsoring this series means **direct access** to a **pre-qualified C-Level audience of decision makers**, including:

Institutional Investors:

Sovereign wealth funds, pension funds, insurance companies, asset managers, banks, and family offices

Public Sector and Regulators:

Central banks, securities exchanges, supervisory authorities, policymakers, and multilateral development banks

Web3 Foundations, FinTechs, and Digital Asset Technologists:

Liquidity Providers, Tokenization platforms, infrastructure providers, centralized and decentralized exchanges, DeFi protocols, and blockchain foundations

Strategic Corporates and Legal Experts:

Enterprises implementing tokenized finance alongside legal professionals building the regulatory frameworks for compliant innovation
