In the News for the Week:

White House Crypto Policy Chief Closes HederaCon 2026

HederaCon 2026 closed with a fireside chat featuring the Executive Director of the White House Crypto Council, Patrick Witt, moderated by Harrison Fields, a former White House Principal Deputy Press Secretary.

Canary Capital Spot HBAR ETF Records First Inflows in Weeks On May 6

The Canary HBAR ETF attracted \$2.49 million on May 6.

Hedera Integrates Into U.S. Insurance Infrastructure

The new solution, built on Hedera and HashSphere, creates a shared, verifiable source of property data to improve underwriting and risk analysis.

[\[VALOUR COMMENTARY\]](#)

HBAR enters the second week of May with an unusually direct signal from U.S. policy circles: the White House crypto policy chief choosing HederaCon as a platform to discuss the Clarity Act is not a coincidence – it reflects Hedera's sustained positioning as the enterprise-grade, compliance-forward network that regulators engage with rather than scrutinise. Spot ETF inflows recorded on May 6, modest in isolation, matter structurally: they confirm that regulated vehicles are beginning to accumulate in earnest, broadening the institutional bid beyond Valour's own suite. With the insurance sector integration extending Hedera's real-world fee-generating footprint deeper into a \$1 trillion addressable market, price momentum, regulatory tailwinds, and genuine on-chain utility are all pointing in the same direction.

This commentary is for informational purposes only and does not constitute investment advice.

[\[HBAR COMMENTARY\]](#)

“The US property and casualty insurance market handles more than \$1 trillion in annual premiums. [...]”

In partnership with Hashgraph, The Institutes RiskStream Collaborative is on a mission to transform how this trillion-dollar industry does business.

- *The solution: a hybrid network infrastructure property risk portal that gives the entire insurance ecosystem - carriers, brokers, reinsurers - a shared, verifiable source of truth for property risk data.*
- *Each property gets a tokenized identifier anchored publicly on Hedera - universally accessible and verifiable by anyone in the ecosystem.*
- *Sensitive COPE and risk data is stored privately on HashSphere, Hashgraph's private network powered by Hedera technology.”*

About SUI - What Is SUI?

Valour Sui (SUI) SEK is an exchange-traded product (ETP) that tracks the price of Sui, the native token of the Sui blockchain. The Sui network is designed for security, scalability, and high performance. Through its unique consensus mechanism, which separates data storage from transaction processing via Narwhal and Tusk, Sui enables fast and efficient handling of large volumes of transactions. Powered by the Move programming language and an object-centric data model, Sui provides a secure and flexible platform for developing decentralized applications (dApps) and smart contracts. Valour Sui (SUI) offers investors exposure to this rapidly growing blockchain infrastructure, which aims to become a cornerstone of the Web 3.0 ecosystem.

In the News for the Week:

CME Group Launches Regulated SUI Futures

CME Group announced last week that its new Sui (SUI) futures contracts are available for trading,

Paga Sui Partnership Brings \$1.5B Monthly Payments Into Crypto

The scope of the Paga Sui partnership includes several products and use cases tied to digital assets and payments.

DeepBook Launches Onchain Prediction Markets

DeepBook Protocol (DEEP) has officially launched its on-chain prediction market infrastructure, named 'Predict,' on the testnet of the Sui (SUI) layer-1 blockchain.

[VALOUR COMMENTARY]

SUI delivered the standout macro event of the week with CME futures – a structural development that expands the institutional toolkit for expressing SUI exposure and places the network in a peer group of three alongside Bitcoin, Ethereum, and Solana. That CME milestone arrived in the same week as the Paga partnership frames precisely why institutional confidence is building: SUI is not accumulating speculative narratives, it is building a compounding distribution stack, connecting DeFi-native infrastructure to mass-market consumer finance across emerging markets. The DeepBook Predict launch adds a further layer, demonstrating that the on-chain application ecosystem is maturing from basic trading into structured financial products.

This commentary is for informational purposes only and does not constitute investment advice.

[SUI COMMENTARY]

“\$15M+ daily volume. 20+ protocols building on DeepBook. Two composable primitives live on Sui. Spot. Margin. The third scales outcome markets onchain.”

DeepBook Protocol on Sui, X, May 2, 2026

About VIRTUAL - What Is VIRTUAL?

Valour Virtual (VIRTUAL) is an exchange-traded product that tracks the price of VIRTUAL, the native token of the Virtuals Protocol. Virtuals is a protocol on the Base blockchain that enables the creation and tokenization of AI-powered virtual agents. These agents can be owned, governed, and co-funded through on-chain tokens, opening new possibilities in gaming, entertainment, and digital communities.

[\[NEWS\]](#)

In the News for the Week:

Virtuals Protocol (VIRTUAL) Surges 3.09% on eToro Listing

The addition of VIRTUAL to eToro has provided fresh retail access and visibility, coinciding with the recent price move.

Virtuals Protocol Launches Arena for Autonomous Trading Agents

Arena allows traders to deploy AI agents into live markets with no tokenization required, competing for a \$200K weekly allocation where profitable strategies earn direct USDC rewards.

[\[VALOUR COMMENTARY\]](#)

VIRTUAL's recent developments combine retail distribution scale with infrastructure maturation. The eToro listing places VIRTUAL in front of a global retail and professional investor base at the moment the on-chain AI agent economy is gaining genuine mainstream recognition, compressing the gap between where awareness sits and where capital allocation follows. The ACP Node v2 release reinforces that the protocol is building for throughput and reliability at the infrastructure layer, not cycling through roadmap promises. With multi-chain expansion already live on Arbitrum and the XRP Ledger, Virtuals Protocol is methodically assembling the cross-chain coordination rails that autonomous agent commerce will require at scale.

This commentary is for informational purposes only and does not constitute investment advice.

[\[VIRTUAL COMMENTARY\]](#)

"Earlier this year, Virtuals Protocol deployed several million dollars to understand whether autonomous trading agents could compete in live markets. The early signal was strong, but the structure had two bottlenecks: many serious traders did not want to tokenize their strategies before proving performance, and the reward system did not give builders enough direct upside when the copy-trading pot performed.

Most traders face the same constraint. They may have a strategy that works, but their account size limits the upside. A \$100 account can prove signal, but it cannot express the full value of that signal. Arena changes that by turning trading performance into capital allocation."

Virtuals Protocol, [X](#), May 5, 2026

[NEWS]

In the News for the Week:

Telegram Replaces TON Foundation, Becomes Largest Validator

Telegram is replacing the TON Foundation as the largest validator of the TON network. With the move, TON becomes the exclusive blockchain for the Telegram Mini Apps ecosystem.

Telegram Wallet Sees \$1b In Trading Volume

Telegram Wallet has recorded over \$1 billion in perpetual futures trading volume in the past month.

Toncoin Surges on Catchain 2.0 Upgrade and Telegram's Fee Cuts

TON network deployed Catchain 2.0 upgrade, reducing block times to 400ms and fees by 6x to support real-time applications.

[VALOUR COMMENTARY]

TON's defining event this week was Telegram's formal assumption of the network's largest validator role, replacing the TON Foundation entirely. This is a consensus-layer commitment – not a commercial arrangement subject to renegotiation – directly binding the network's long-term security to a platform with 900 million users. The \$1 billion in monthly perpetual futures volume through Telegram Wallet confirms the financial application layer is already generating sustained activity at scale. With Catchain 2.0 providing the technical foundation for sub-second finality and near-zero transaction fees, the infrastructure is positioned to absorb materially higher throughput without architectural constraint.

This commentary is for informational purposes only and does not constitute investment advice.

[TON COMMENTARY]

“Fees in TON have dropped 6x – to nearly zero.

Next step – Telegram replaces the TON Foundation as the driving force behind TON and becomes its largest validator.

The focus shifts to tech superiority.

New <http://ton.org>, new dev tools, new performance upgrades.

Timeline: 2-3 weeks.”

Pavel Durov, Founder & CEO at Telegram, X, May 4, 2026

[NEWS]

In the News for the Week:

The New World ID: Proof of Human for the AI Era

The new World ID introduces an account-based architecture that makes proof of human more secure, more flexible, and ready for widespread adoption across consumer and enterprise use cases.

Worldcoin Moves 30M WLD to BitGo Wallet

The reported transfer was valued at about \$8.17 million at the stated market price.

Token Unlock Reduction Confirmed for July 2026

About 80% of tokens originally scheduled to unlock by July 2026 will be released gradually, concluding by 2028.

[VALOUR COMMENTARY]

WLD's week centred on the launch of the new World ID – a full-stack, account-based proof-of-human protocol expanding verified identity across consumer platforms, enterprise communications, and AI agent delegation. The upgrade represents a meaningful broadening of the protocol's utility surface at a moment when demand for cryptographic proof of humanness is becoming a structural requirement across digital infrastructure. On the supply side, the confirmed 43% reduction in daily token unlocks from July 2026, alongside the transfer of 30 million WLD to BitGo custody, reflects a measured approach to treasury management that improves the token's flow dynamic into the second half of the year.

This commentary is for informational purposes only and does not constitute investment advice.

[WLD COMMENTARY]

"Now it's become easier to understand why 'proof of human,' as TFH calls it, might be a pressing issue. Deepfaked imposters have become so convincing that they've already been used in impersonation scams that have netted millions of dollars for cybercriminals. Moreover, the rise of agentic AI has us hurtling toward an era when agents will jostle for resources across the internet—not always for sinister purposes, but certainly in ways that will complicate life for those of us made of flesh and blood... Consequently, a reliable means of validating one's humanity—CAPTCHAs are notoriously easy to fool—could become essential infrastructure. 'At the limit, every single app and website on the internet will have to use something like World ID to protect itself and its users.'"

Tiago Sada, Product Officer at Tools for Humanity, [LinkedIn](#), May 7, 2026

About ARB - What Is ARB?

Valour Arbitrum (ARB) is an exchange-traded product that tracks the price of ARB, the governance token of the Arbitrum network. Arbitrum is a Layer 2 scaling solution for Ethereum that uses Optimistic Rollups to process transactions more efficiently. It enables faster and cheaper transactions while maintaining compatibility with Ethereum smart contracts. ARB is used for governance, allowing token holders to vote on proposals related to protocol upgrades and the ecosystem's development. The network is widely used in DeFi and aims to make Ethereum-based applications more accessible and scalable.

[NEWS]

In the News for the Week:

ArbitrumDAO Elects Six New Security Council Member

The Security Council is a 12-member body divided into two groups, with elections held for one of the two cohorts every six months.

Judge Clears \$71M ETH Transfer to Aave as rsETH Recovery Enters Final Phase

An order modifying a prior asset freeze, was issued last week, permitting the Arbitrum Security Council to transfer approximately 30,765 ETH, valued at roughly \$71 million, to an Aave LLC-controlled wallet address.

[VALOUR COMMENTARY]

Two governance developments defined ARB's week. The election of six new ArbitrumDAO Security Council members marks a further step in the network's decentralisation roadmap. Separately, a federal court cleared the transfer of \$71 million in ETH held on Arbitrum, resolving a key procedural question around the interaction between on-chain governance and legal process.

This commentary is for informational purposes only and does not constitute investment advice.

[ARB COMMENTARY]

"Programmable markets make settlement instant and operations more efficient.

That's why businesses are building on the Arbitrum Platform: +\$78M in @USDT0_ to capital flowed into the platform in just one week.

Fintechs moving in this direction are positioned to win."

Arbitrum, X, 8 May, 2026
