

INDEX WEIGHT CHANGE FOCUS · DVIO INDEX

DVIO Index Weight Change Spotlight: QNT

REPORTING PERIOD · 2026-05-09 TO 2026-05-15

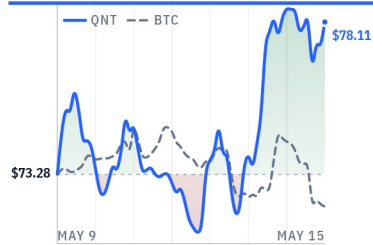

Quant (QNT) tops this week's DVIO Index Weight Change table for the 2026-05-09 to 2026-05-15 window. The investment case rests on Overledger, Quant's API-based gateway connecting regulated finance to distributed-ledger networks, lately given concrete form by the March 2026 integration with Murex's MX.3 capital-markets platform. The in-window trigger is market-based: a first-place DVIO ranking and a +6.59% seven-day move against BTC at -1.40%. [\[D1, R1, R3\]](#)

ASSET CONTEXT

Quant is an interoperability project built around Overledger, an API-based gateway linking traditional financial systems, payment rails and blockchain networks. QNT is the ecosystem's utility token, anchored to Overledger's institutional adoption rather than short-term price sentiment. [\[R1, R2, R3, D2\]](#)

7D PRICE PATH

ASSET SNAPSHOT

QNT 7D Return	+6.59%
BTC 7D (benchmark)	-1.40%
Market Cap	\$1.14B
QNT 7D Volume	+12.61%

EXTERNAL MARKET CONTEXT

7D PRICE ▲ +6.59% BTC -1.40%	7D VOLUME ▲ +12.61%	24H VOLUME ▼ \$8.79M 24H -8.01%
CMC RANK #62	FDV \$1.10B	MARKET CAP \$1.14B

Spot-market data show seven-day spot performance was +6.59%, BTC moved -1.40% over the same window, seven-day volume moved +12.61%, 24-hour volume was \$8.79M, CoinMarketCap ranked QNT #62, and market cap was \$1.14B. [\[D1, M1, M2, M3\]](#)

LIQUIDITY HEATMAP

OI \$21.49M	OI 7D ▲ +6.15%	FUNDING ▲ +0.0027%	LIQ. \$234.15K
----------------	-------------------	-----------------------	-------------------

OI (open interest): notional value of outstanding perp and futures contracts. OI 7D: change in open interest over the reporting week. Funding: latest perpetual-swap funding rate, positive means longs pay shorts and negative means shorts pay longs. Liq. (liquidations): total long and short positions force-closed across the reporting window, aggregated from CoinGlass.

VENUE	OI	SHARE	7D Δ
Binance	\$3.82M	17.79%	+26.59%
Bybit	\$2.11M	9.84%	+2.69%
Bitunix	\$1.98M	9.20%	+23.59%

Open interest expanded across the seven-day window, indicating stronger derivatives participation around the asset. [\[M3\]](#)

ASSET IN FOCUS: QNT

Quant's spotlight rests on a structural thesis: Overledger as institutional-grade interoperability between regulated finance and distributed-ledger rails. The in-window signal that surfaced QNT is market-based: a first-place DVIO ranking and a push toward \$80 resistance on stronger futures participation. [\[D1, R1, R4\]](#)

INSTITUTIONAL INTEROPERABILITY

Enterprise interoperability for institutions
Quant frames Overledger as enterprise-grade interoperability for financial institutions: one gateway to connected DLTs, with privacy, security and legacy-system integration. The March 2026 Murex partnership carries it into capital markets: tokenised deposits and digital bond settlement inside existing MX.3 workflows. [\[R1, R2, R3\]](#)

WHAT QUANT IS

Overledger connects chains and financial systems
Overledger is the technology behind QNT: a universal API connector across traditional financial systems and blockchain networks, supporting multi-chain transactions, smart-contract execution, and security and compliance controls. [\[R1, D2\]](#)

OVERLEDGER DIFFERENTIATION

One gateway across every network
Most blockchain interoperability runs on cross-chain bridges and messaging protocols. Overledger takes a different approach: an enterprise API gateway, reached through one standardised interface, built for regulated finance on an open IETF standard, the Secure Asset Transfer Protocol. [\[R1, R2\]](#)

DIGITAL MONEY ARCHITECTURE

Overledger across tokenised money layers
Quant's three-layer digital money architecture positions Overledger as the horizontal interoperability layer across wholesale CBDC, tokenised deposits, stablecoins, public networks and legacy rails. [\[R5, R1\]](#)

TOKEN UTILITY

QNT tracks Overledger adoption
QNT is the Quant ecosystem's utility token. For an investor, Overledger's progress, from platform adoption to integrations such as Murex, sets the fundamental backdrop QNT trades against, making interoperability traction the long-horizon driver to watch. [\[R1, R3\]](#)

IN-WINDOW SIGNAL

The market signal that surfaced QNT
The reporting-window trigger is a market signal: QNT took the first-place DVIO slot as in-window coverage described it pushing toward \$80 on stronger spot volume and open interest. That is traders re-rating QNT, ahead of adoption proof. [\[R4, M1, M2, M3, D1\]](#)

INVESTOR READ-THROUGH

Signal Context. QNT's first-place DVIO ranking reads most reliably as market participation: QNT returned +6.59% versus BTC at -1.40%, spot volume rose +12.61%, and open interest rose +6.15%. That measures trading interest. Quant's institutional positioning supplies the structural case; the in-window move confirms participation, and adoption evidence is the separate test. [\[D1, M1, M2, M3, R4\]](#)

WHAT TO MONITOR

The DVIO signal flags Quant for closer review, with limited confirming ecosystem data this week. The watch items below separate two reads: whether trading participation holds, and whether Quant's official execution turns the structural thesis into adoption evidence. Each sets its window and direction. [\[D1\]](#)

Market follow-through. Track whether QNT keeps market participation after the \$80 resistance test through price versus BTC, spot volume and open interest in the next weekly window. [\[R4, M1, M2, M3, D1\]](#)
NEXT WEEKLY REBALANCE WINDOW
CONFIRMATION: A sustained relative-price move with volume and open interest still expanding would support the market-led read.
WEAK READ: A reversal versus BTC with falling volume or open interest would point to a short-lived technical move.

Official execution context. Monitor Quant's official channels for Overledger, tokenised deposit and capital-markets infrastructure updates that could add project-specific confirmation. [\[R1, D1\]](#)

SUBSEQUENT WEEKLY WINDOWS
CONFIRMATION: New official Overledger or institutional infrastructure updates would give the market move stronger project context.
WEAK READ: No official follow-through would keep the read centered on trading participation, with adoption evidence still pending.
